Health Technology Services Earns National Recognition for Reaching Significant Milestone

(July 15, 2015) — Health Technology Services (HTS) announced today that it met 100 percent of its milestone target by successfully assisting 1,000 priority primary care providers in achieving Electronic Health Record (EHR) Meaningful Use Milestone 3. HTS is the federally designated health information technology regional extension center for Montana and Wyoming. HTS supports health care providers in their use of electronic health records (EHRs).

“This is a significant accomplishment,” says Sara Medley, CEO for Mountain-Pacific Quality Health, the parent organization of HTS. “In a recent letter from the Office of the National Coordinator for Health Information and Technology (ONC), HTS was commended for not only ensuring Montana and Wyoming providers meet their EHR meaningful use requirements, but the letter also lauded HTS leadership and staff for translating often complex and sometimes unknown requirements into a plan to help providers who needed assistance most,” she said.

About Health Technology Services — Champions the adoption and use of Health Information Technology (HIT) and the generated data to meet the goals of care coordination, quality outcomes, improved efficiencies and assists organizations in their movement toward pay for performance.

About Mountain-Pacific Quality Health — Mountain-Pacific holds federal and state contracts that allow us to oversee the quality of care for Medicaid and Medicare members. We work within our communities to help improve the delivery of health care and the systems that provide it. Our goal is to increase access to high quality health care that is affordable, safe and of value to the patients we serve.
